

Frequently Asked Questions

- *Can I only take part in only one specific subtask?* Yes, you can participate in how many subtasks you want, ranging from one to all.
- *Can I create one system to take on all subtasks?* Yes, you can. You will only need to send the files of the various runs separately. E.g., one file for Subtask 1-it, another for Subtask 1-en, etc.
- *If I ask a LLM to annotate part of the data is that considered as an unconstrained run?* No, it still is a constrained run.
- *Can I create synthetic data starting from the training data?* Yes, you can and it still is a constrained run.
- *If I ask people to annotate part of the data is that considered as an unconstrained run?* Yes, it is an unconstrained run.
- *Can I use the data you gave us for a certain language and use it for a subtask specific of another language (e.g.: using Italian data and English data in addition to Spanish for subtask 1-en)?* Yes, you can but it will be considered unconstrained.
- *Is there a big difference between a constrained and an unconstrained run?* No, we will not make separate rankings but we will just mark the unconstrained runs for fairness.
- *Can I use models of any sizes in parameters?* Yes, you can. We will ask you the size of the models you used for a better discussion of the results in the paper.
